Time taken 14 mins 22 secs

Question **1**

Complete

Marked out of 1.00

The “Requirements Collection and Analysis” phase of database design gives the Data Requirements. These Data Requirements –

Select one or more:

- ☐ a. Includes the retrievals and updates applied to the database
- ☒ b. Can always be mapped to an ER Model
- ☒ c. Specifies the key attributes of strong entity types
- ☐ d. Always generates (gives/maps to) only one ER Model
- ☐ e. None of the others

Question **2**

Complete

Marked out of 1.00

An ER Data Model -

Select one or more:

- ☐ a. None of the others
- ☐ b. Must have at least one relationship type
- ☐ c. Must have at least one derived attribute
- ☒ d. Can have exactly one strong entity type
- ☐ e. Must have at least one weak entity type

Question **3**

Complete

Marked out of 1.00

The attribute of an ER Data Model -

Select one or more:

- ☐ a. None of the others
- ☒ b. Can uniquely identify all entities of an entity type
- ☒ c. Can take multiple values
- ☒ d. Can have its value determined by the values of the attributes of other entity types
- ☐ e. Can always represent a binary relationship type

Question **4**

Complete

Marked out of 1.00

If there is a 'weak entity type' in an ER model, then in the ER model

Select one or more:

- ☒ a. There must be at least one identifying relationship type
- ☐ b. None of the others
- ☒ c. The weak entity type must have at least one attribute
- ☒ d. There is at least one strong entity type
- ☐ e. There must be at least one derived attribute

Question **5**

Complete

Marked out of 1.00

An identifying relationship type –

Select one or more:

- ☐ a. None of the others
- ☒ b. Can be a one-one cardinality binary relationship type
- ☐ c. Has at least one strong entity type participating in it
- ☐ d. Is always a binary relationship type
- ☐ e. Can allow for partial participation of the weak entity type in it
